FOREWORD

UNPRECEDENTED winter losses prevented the issue of a 1934 catalogue (36 degrees below zero with no snow protection). All our plants were then removed to a new place of ideal soil, virgin to Irises. They are in splendid growth, free from borers and the healthiest lot we have ever seen.

Unpredictable springs almost ruined our 1933 crop of 2000 seedlings, but a few good ones appeared among the survivors. The winter of 1933-4 killed all but about 15 % of the 1934-5 crops, aggregating some 7200; the salvaged will bloom in 1936. Those crops comprised approximately 3000 from X - ray treatments of pollen, plants and seed, the losses practically nullifying that work. So, for three years, we have had very few seedlings to bloom. There are 3500 now in strong growth for 1936 and some interesting developments will undoubtedly appear.

We are glad that we can again invite the interested to our seedling fields. OUR HEIGHT OF BLOOM AT THE NEW FIELD IS ABOUT JUNE 16, INSTEAD OF JUNE 10 AS AT THE OLD.

Our real interest has never gone beyond the hybridizing and we intend to confine our future efforts to that work alone, *limiting our retail listings to our own originations*. To permit that, we are now selling all Irises except mere breeding stocks and a few novelties for comparison with new seedlings. The prices that follow are well below the market and are expected to insure quick disposal of our rather limited stocks.

We grow no standard commercial Peonies, but are propagating a small number selected from the 3500 Japanese and double seedlings raised by us. We hope to offer two in 1936, SPRING BEAUTY and HARRY F. LITTLE. Were further confirmation needed, the 1935 blooms on HARRY F. LITTLE fully justified the two Medals it received in 1934.
